

# FoodMob

An Online Multi Restaurant Food Ordering and Management with Delivery System

**Update Instructions**

Copyright 2022 **TheDevs**. All rights reserved.

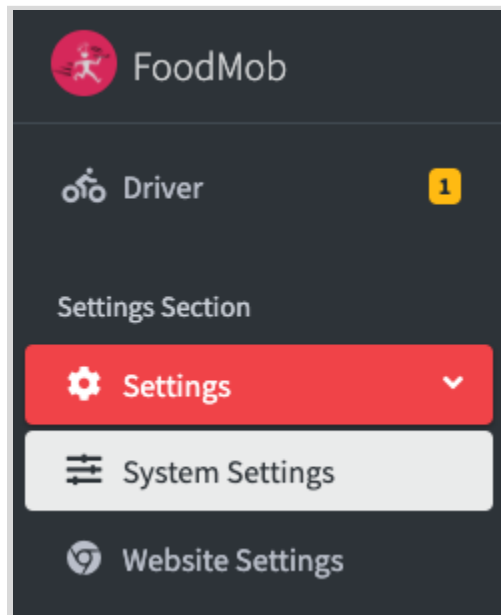

## **HEADS UP**

- Before updating to the latest version, we would highly appreciate it if you keep a backup of the existing version.
- Make sure that Zip extension is enabled on your server. Otherwise your application will not be able to read a Zip file. Which is mandatory for updating this application.
- Also make sure that your application's files have read and write permissions.

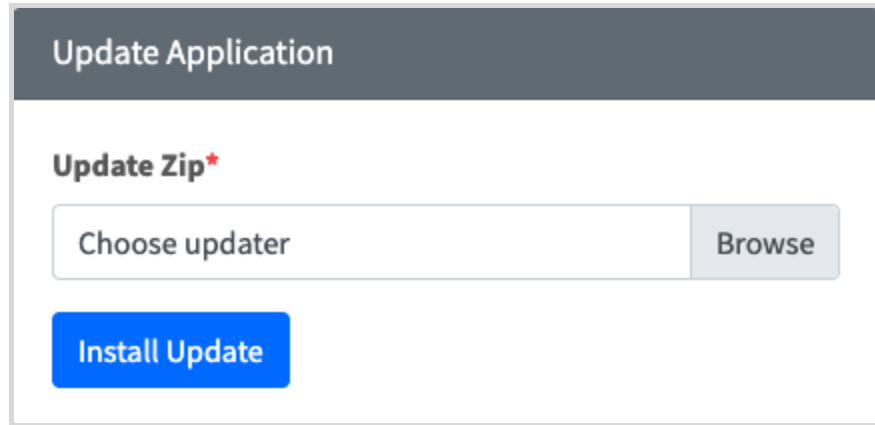

**Question :** How to update to version 3.0 from version 2.0?

**Answer :** Please follow these steps carefully to update your application to version 3.0.

1. First of all make sure that you are running version 2.0. Otherwise updating will fail. You will see the current version of the application on the footer of the backend. **If you are running version 1.3, go through the entire documentation to update the application to 2.0 and then 3.0.**
2. Go to the “**update\_pack**” directory from the copy of FoodMob you just downloaded from Codecanyon.
3. Now login to your FoodMob application as Admin role.
4. Move to “**System Settings**” option from the **Setting** section.

5. You will find the “**Update Application Section**” there. Where you will be able to upload the updater zip file.

A dialog box titled "Update Application" with a dark grey header. Below the header, the text "Update Zip\*" is displayed in bold. Underneath, there is a text input field containing the placeholder text "Choose updater" and a "Browse" button to its right. At the bottom of the dialog, there is a prominent blue button labeled "Install Update".

Update Application

Update Zip\*

Choose updater Browse

Install Update

6. Upload the “**update\_3.0.zip**” file here. Which is located inside the “**update\_pack**” directory.
  7. Hit the Install Update button.
  8. If everything is okay, you will find a success confirmation.
- That's it.

Now, If you face this alert “**Please update your application 2.0 first**” while updating your application to 3.0, that means you are running version 1.3 and you need to update your application to 2.0 first.

We have attached another zip file named “**update\_2.0.zip**”. It will update your application to 2.0.

As well as we have attached 1.3 also.

If you face any issue while updating your application please let us know via mail. You can send us support mail here “[help.thedevs.tech@gmail.com](mailto:help.thedevs.tech@gmail.com)”
